

Aero Navigator

Version 0.1.0

A Navigation Log, developed to replace multiple pages of notes and provide a succinct template to manage all the information needed as a Cross Country Pilot!

Getting Started

A simple, bare-bones navigation sheet will look like this.

```
#import "@preview/aero-navigator:0.1.0": *
```

```
#show: aero-navigator
```

Nav Log

Callsign		Type		Sartime		Departure Airport	
DEPARTURE TIME		FORECAST		NOTAM		W & B	
ETO	ATD	GAFS	TAFS	GPWT	Location FIR	Head	WGT KG CG %

()						REQUIRED		
()						MARGIN		
()						ENDURANCE		

Aerodrome	Elev	CTAF	AMIS	Divert	

Field Layout	Pilot Notes	POSN ALT HDG (M) DIST ETI EST ATD					

Usage

This template is very flexible and can be used in a number of ways.

```
#import "@preview/aero-navigator:0.1.0": *
```

```
#show: aero-navigator.with(  
  aircraft: "both",  
  callsign: "24-8569",  
  type: "SLG2",  
  departure: "YHEC",  
  variant: "2",  
  lines: false,  
  waypoint: false,  
  waypoints: "",  
  fixes: []  
)
```

You can define a waypoints using a json object such as:

```
#import "@preview/aero-navigator:0.1.0": *

#show: aero-navigator.with(
  callsign: "24-8569",
  type: "SLG2",
  departure: "YHEC",
  waypoint: true,
  waypoints: "./waypoints.json",
  fixes: []
)

[
  {
    "Waypoint": "Wyaralong Lake",
    "Image": "./examples/waypoint/wyaralong.jpg"
  },
  {
    "Waypoint": "Spicers Peak",
    "Image": "./examples/waypoint/before_ywck.jpg"
  },
  {
    "Waypoint": "Warrick",
    "Image": "./examples/waypoint/ywck.jpg"
  },
  {
    "Waypoint": "Auburnvale",
    "Image": "./examples/waypoint/YMFA.jpg"
  },
  {
    "Waypoint": "Greenmount",
    "Image": "./examples/waypoint/ygmt.jpg"
  },
  {
    "Waypoint": "Bromleton",
    "Image": "./examples/waypoint/bml.jpg"
  }
]
```

Which will generate a table with the waypoint names and images - helpful for any hard to spot areas, or notes about specific locations. Additionally this could be used for noting airspace boundaries, or other important locations.
